

British Solar Renewables acquires Berden Solar Park in Essex

- British Solar Renewables acquires a 56MWp, consented solar project in Essex, strengthening its existing installed base of c.610MWp

12 MAY 2026 - British Solar Renewables (BSR) is pleased to announce the acquisition of Berden Solar Farm, a consented, ready-to-build solar project located near Bishop's Stortford in Essex.

Berden Solar Farm is a 56MWp ground-mounted solar project, situated on approximately 177 acres of land. Once operational, the site is expected to generate around 60GWh of clean electricity each year, contributing to the UK's renewable energy supply while continuing to support agricultural use of the land.

The project has been awarded a 20-year Contract for Difference (CfD) in Allocation Round 7, providing long-term revenue certainty. A 2027 grid connection positions Berden Solar Farm as a construction-ready addition to the UK's clean energy infrastructure.

Tim Humpage, Chief Executive Officer of British Solar Renewables, said: "We're delighted to welcome Berden Solar Farm into the BSR portfolio. It's a high-quality, consented project that aligns strongly with our focus on delivering renewable energy infrastructure capable of making a meaningful contribution to the UK's clean energy goals."

About British Solar Renewables

British Solar Renewables (BSR) is a leading renewable independent power producer with over a decade of experience in solar PV and battery energy storage systems (BESS). The company operates with a fully integrated platform, taking sites through development, construction and in operation. With a strong presence in both the UK and Australia, BSR is advancing a pipeline of nearly 18GW of projects collectively. BSR partnered with ICG Infrastructure in July 2022.
