CWG partners with ENGIE and British Solar Renewables to generate renewable energy

- One of the largest long-term renewable power purchase agreements (PPA) by a UK property owner
- Power purchase agreement structured and supplied by ENGIE, with renewable generation from British Solar Renewables
- Agreement will provide CWG with approximately 40% of its current electricity consumption with renewable energy

CWG has partnered with ENGIE in the UK and British Solar Renewables (BSR) for a 10-year power purchase agreement (PPA) – one of the largest agreements of its kind for a major UK mixed-use district.

Under the agreement, ENGIE will manage and structure the supply of renewable electricity generated by Knowl Green, a 50MW UK solar farm developed and owned by BSR. This will enable CWG to benefit from long-term price certainty, helping to reduce exposure to market volatility while increasing its supply of low-carbon electricity and supporting the decarbonisation of one of London's leading commercial districts.

The PPA strengthens CWG's long-term energy strategy by providing a reliable supply of renewable power in alignment with industry-recognised decarbonisation approaches. The agreement is expected to supply approximately 40% of CWG's current electricity consumption.

The PPA is part of a phased and resilient approach for CWG's customers. It builds on CWG's approach to turn sustainability ambition into action. CWG has already reduced its emissions by 69% across Scope 1, 2 and 3 emissions from downstream leased assets from a 2017 baseline, which is part of a wider programme of activities.

The agreement underpins the development and long-term operation of a new UK solar project by BSR, contributing to the growth of local renewable generation capacity.

By facilitating direct offtake from renewable assets, ENGIE is expanding its upstream renewable portfolio, strengthening its position in the UK flexibility and energy management

market, and accelerating the deployment of low-carbon infrastructure. This structure has already been applied across a range of commercial customers and asset types, with ENGIE delivering market-leading risk management services that create value for both generators and end users.

Sophie Goddard, Managing Director – ESG at CWG, said: “This agreement is a significant step forward, accelerating clean energy generation whilst delivering price certainty and strengthening the resilience of our energy strategy for our customers.”

Tim Humpage, CEO of British Solar Renewables, said: “Knowl Green is exactly the kind of project we want to be delivering. Securing a long-term PPA with ENGIE gives it a strong foundation, while allowing us to retain ownership and build out our portfolio as an independent power producer. Connecting that generation directly to demand at Canary Wharf is where we see real progress.”

Nathalie Morichon, UK Managing Director – Energy Management at ENGIE, said: “This agreement demonstrates how ENGIE can support large-scale commercial customers - like the iconic Canary Wharf, to decarbonise through innovative energy solutions. By structuring and delivering this long-term renewable PPA, we are enabling CWG to access low-carbon electricity at scale while also supporting the development of new solar capacity across the UK.”

The solar development has full planning consent and grid connection in place. Once operational, Knowl Green is expected to generate approximately 54GWh of clean electricity each year, enough to power around 12,500 UK homes. The project is also expected to avoid around 11,000 tonnes of CO₂ emissions annually.

Notes to Editors

About CWG

CWG is the developer of the largest urban regeneration project in Europe. CWG develops, manages and currently owns interests in approximately 9 million square feet of mixed-use space and over 1,400 Build to Rent apartments. Canary Wharf's retail offering is ranked the UK's number one shopping destination by Green Street.

CWG is committed to turning sustainability ambition into impactful action. Examples include purchasing 100% electricity from renewable sources since 2012, our partnership with the Eden Project creating a place for nature and people and working to deliver our Science-Based Targets.

CWG has created a 24/7 city where people can live, work and thrive and enjoy all the benefits that Canary Wharf provides: great transport links, access to 16.5 acres of green spaces and waterside living; and a wide range of amenities including an award-winning arts and events programme. Canary Wharf's retail and leisure offer includes over 80 bars, cafes and restaurants and more than 320 shops, including 8 grocery stores, pharmacies and health clubs all within 15 minutes' walk. CWG recorded its highest annual footfall of more than 76 million in 2025.

About ENGIE

ENGIE is a major player in the energy transition, whose purpose is to accelerate the transition towards a carbon-neutral economy. With more than 90,000 employees in 30 countries, the Group covers the entire energy value chain, from production to infrastructures and sales. ENGIE combines complementary activities: renewable electricity and green gas production, flexibility assets (notably batteries), gas and electricity transmission and distribution networks, local energy infrastructures (heating and cooling networks) and the supply of energy to individuals, local authorities and businesses. Every year, ENGIE invests on average €12 billion per year to drive forward the energy transition and achieve its net-zero carbon goal by 2045.

About ENGIE in the UK

ENGIE employs more than 8,000 people in the UK and operates right across the energy value chain, from renewable generation to energy supply. It owns and manages a diverse portfolio of low-carbon generation, distribution and flexible storage assets, including one of Europe's largest pumped-storage hydro plants. ENGIE owns UK Power Networks, the UK's leading electricity distribution network operator, serving 8.5 million customers across London, the South East and East of England. Through Ocean Winds, its joint venture, ENGIE is one of Scotland's largest offshore wind generators with 1.8 GW of capacity. It also supplies energy to more than 17,000 business customers and injects over 210 GWh of biomethane into the grid each year. Over more than 20 years, ENGIE has invested billions in the UK's energy transition - supporting energy security and enabling customers to decarbonise at scale.

ENGIE Financials

Turnover in 2025: €71.9 billion. The Group is listed on the Paris and Brussels stock exchanges (ENGI) and is represented in the main financial indices (CAC 40, Euronext 100, FTSE Euro 100, MSCI Europe) and non-financial indices (DJSI World, Euronext Vigeo Eiris - Europe 120 / France 20, MSCI EMU ESG screened, MSCI EUROPE ESG Universal Select, Stoxx Europe 600 ESG-X).

ABOUT BSR

British Solar Renewables (BSR) is a leading renewable independent power producer with over a decade of experience in solar PV and battery energy storage systems (BESS). The company operates with a fully integrated platform, taking sites through development, construction and in operation. With a strong presence in both the UK and Australia, BSR is advancing a pipeline of nearly 18GW of projects collectively. BSR partnered with ICG Infrastructure in July 2022.
